Assembly Instructions

Step1: Construct the metal tent frame by assembling metal poles, corners, and connectors as per diagram for each model. **To avoid damage, it's most important you check that all the poles are pushed completely in to each corner/ connector joiner.** Failing to do so will not only make tent cover difficult to fit but may stretch the seams and will allow emissions of light from the functioning tent.

Step2: Un-zip top & base zipper system from FRONT SIDE (where has seaHawk logo & see-through windows) all the way to the ends. **But it is important you leave the zippers on BACK SIDE closed.**

Step3: Locate tents' ROOF (REFER pic A) and place neatly & carefully over all 4 corners of top frame ensuring a snug fit. **<THIS SHAPE OF TENT CAN ALSO BE ASSEMBLED FROM THE BASE!!!>**

Step4: Slip base section of tent cover beneath assembled "A" poles, and ensure it fits in a neat and precise manner around the tent frame corners and sides. Refer pic B.

Step5: Carefully close up two large horizontal zipper systems simultaneously. You may have to push the upright poles in a bit as you zip around each corner. Refer pic C.

Step6: Attach shallow/ deep bars, water-proof trays, pouch in place and Nylon fabric straps.

Dismantling of Smart Tent...

1) Ensure the tent is clean and dry before dismantling.

2) Make reverse operation as per above instruction. (step 6->step 5->step 4->step 3->step 2->step 1)

To ensure your Smart Tent maintains the same "lightproof" quality, always dismantle carefully and avoid stretching the seams of the tent cover.
